**Experiments in Microprocessors Lab , Assignment Sheet #1**

1. Two numbers MN H and KL H are stored in 2050 H and 2051 H , respectively. Write a program to assemble them as NK H and LM H store them in 2052 H and 2053 H

**Solution :-**

| Line # | Address in Hex | Label | Instruction (Mnemonics) | Opcode in Hex | Remarks  |
|--------|----------------|-------|-------------------------|---------------|--|
| 1.     | 0000           |       | LXI H, 2050             | 21            | Address of the first number loaded in HL register pair                       |
|        | 0001           |       |                         | 50            |  |
|        | 0002           |       |                         | 20            |  |
| 2.     | 0003           |       | MOV A, M                | 7E            | A = M[HL]  |
| 3.     | 0004           |       | LXI H, 2051             | 21            | Address of the second number loaded in HL register pair                      |
|        | 0005           |       |                         | 51            |  |

  - ☐ Show entire memory content
  - ☒ Show only loaded memory location
  - ☐ Store directly to specified memory location

3. N numbers are stored in consecutive m/m location starting from 2050 H . The value N is stored in 204F H .

i) Find the maximum among the N numbers.

Solution :-

| Line # | Address in Hex | Label | Instruction (Mnemonics) | Opcode in Hex | Remarks   |
|--------|----------------|-------|-------------------------|---------------|---|
| 1.     | 0000           |       | LXI H, 204H             | 21            | Load the address of the first number in HL register pair                |

- Simulate Tab:**

Start From → 0000

Run all At a Time      Step By Step

☐ Show entire memory content  
☒ Show only loaded memory location  
☐ Store directly to specified memory location

iii) Sort the N numbers in ascending order.

Solution :-

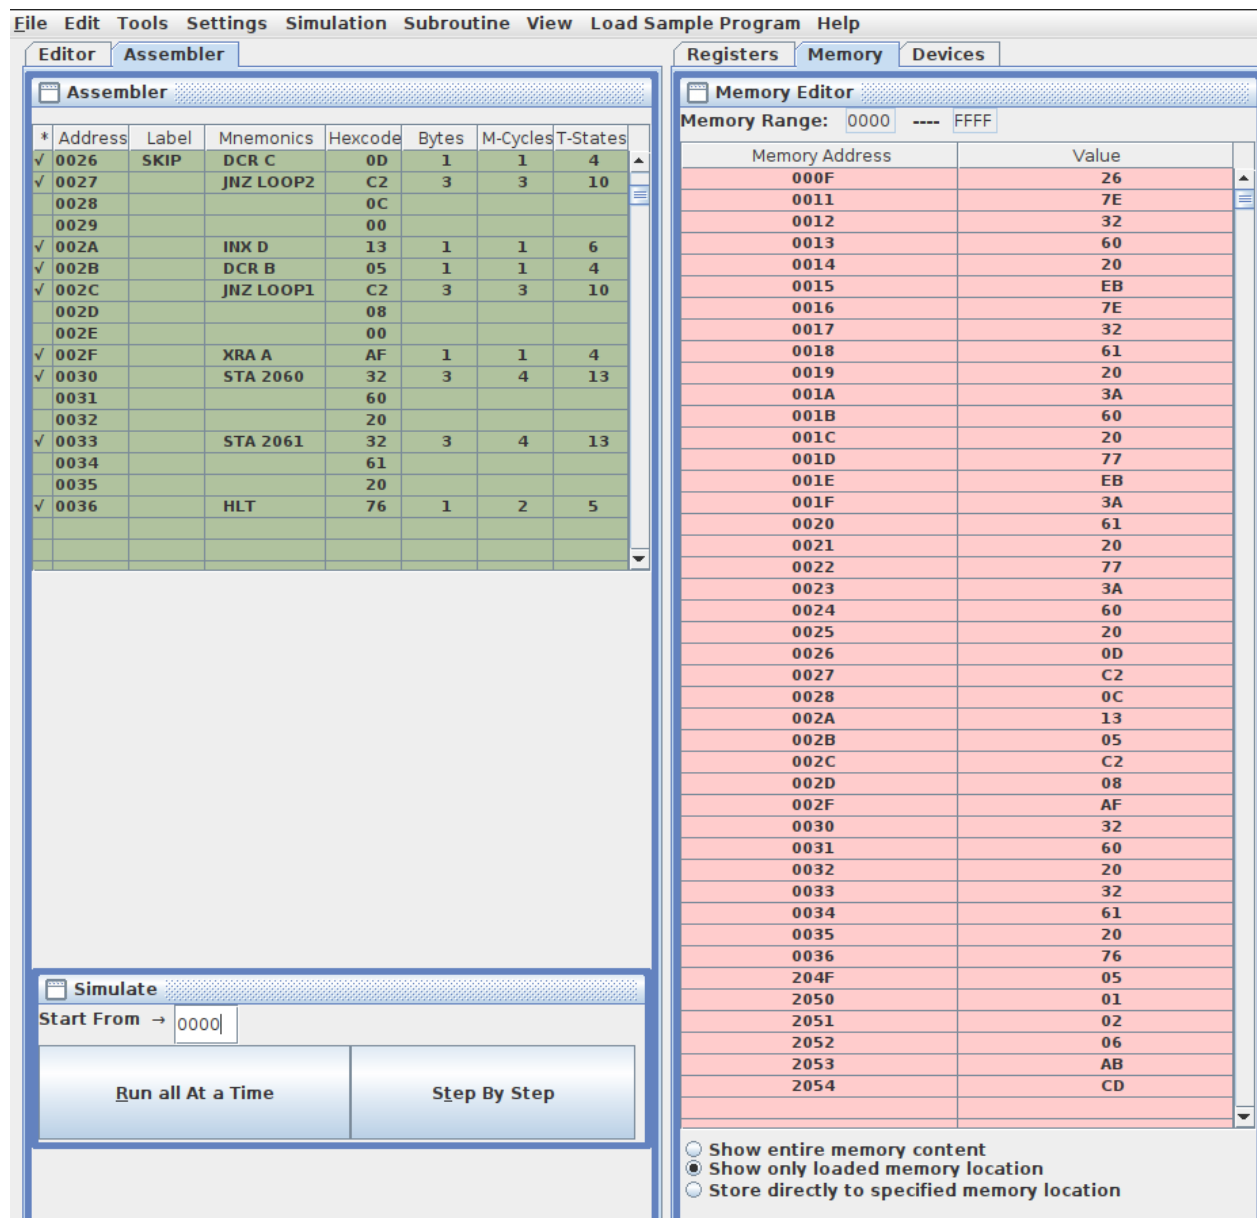

| Line # | Address in Hex | Label | Instruction (Mnemonics) | Opcode in Hex | Remarks  |
|--------|----------------|-------|-------------------------|---------------|--|
| 1.     | 0000           |       | LXI H, 204F             | 21            | Load the address containing the number of elements to be sorted in HL register pair          |

  - ☐ Store directly to specified memory location

4. N numbers are stored in consecutive m/m location starting from 2050 H . The value N is stored in 204F H . Write a program to copy the even and odd numbers starting from 2100 H and 2200 H , respectively. Store the total no. of even and odd numbers in 2300 H and 2201 H , respectively.

Solution :-

| Line # | Address in Hex | Label | Instruction (Mnemonics) | Opcode in Hex | Remarks  |
|--------|----------------|-------|-------------------------|---------------|--|
| 1.     | 0000           |       | LXI H, 204F             | 21            | HL = 204FH   |
|        | 0001           |       |                         | 4F            |  |
|        | 0002           |       |                         | 20            |  |
| 2.     | 0003           |       | MOV B, M                | 46            | B = M  |

5. N numbers are stored in consecutive m/m location starting from 2050 H . The value N is stored in 204F H . Write a program to test whether a number stored in 204E H is present in the list. If present, store its position in the list at 204D H ; otherwise store FF H .

| Line # | Address in Hex | Label | Instruction (Mnemonics) | Opcode in Hex | Remarks |
|--------|----------------|-------|-------------------------|---------------|---------|
| 1.     | 0000           |       | MVI A, FF               | 3E            | A = FFH |
|        | 0001           |       |                         | FF            |         |

|     |      |      |             |    |  |
|-----|------|------|-------------|----|--|
| 2.  | 0002 |      | STA 204D    | 32 | M[204D] = A, initialising the memory location with FF incase not found |
|     | 0003 |      |             | 4D |  |
|     | 0004 |      |             | 20 |  |
| 3.  | 0005 |      | LXI H, 204F | 21 | HL = 204F  |
|     | 0006 |      |             | 4F |  |
|     | 0007 |      |             | 20 |  |
| 4.  | 0008 |      | MOV B, M    | 46 | B = M  |
| 5.  | 0009 |      | LXI H, 2050 | 21 | HL = 2050, loading the starting address                                |
|     | 000A |      |             | 50 |  |
|     | 000B |      |             | 20 |  |
| 6.  | 000C |      | LDA 204E    | 3A | A = M[204E] loading the accumulator with number to be searched         |
|     | 000D |      |             | 4E |  |
|     | 000E |      |             | 20 |  |
| 7.  | 000F | LOOP | CMP M       | BE | Compare the number with A , if matched then the zero flag will be set  |
|     | 0010 |      | JNZ SKIP    | C2 | If ZERO is not set then number is not found, else found                |
|     | 0011 |      |             | 18 |  |
|     | 0012 |      |             | 00 |  |
| 8.  | 0013 |      | MOV A, C    | 79 | A = C, number's position stored in A                                   |
| 9.  | 0014 |      | STA 204D    | 32 | Store the position in the desired memory location M[204D] = A          |
|     | 0015 |      |             | 4D |  |
|     | 0016 |      |             | 32 |  |
| 10. | 0017 |      | HLT         | 76 | Stop Operation   |
| 11. | 0018 | SKIP | INX H       | 23 | HL = HL + 1  |
| 12. | 0019 |      | INR C       | 0C | C = C + 1, incrementing the positional value                           |

|     |      |  |          |    |  |
|-----|------|--|----------|----|--|
| 13. | 001A |  | DCR B    | 05 | B = B - 1  |
| 14. | 001B |  | JNZ LOOP | C2 | Continue till the first occurrence of the number is not obtained |
|     | 001C |  |          | 0F |  |
|     | 001D |  |          | 00 |  |
| 15. | 001E |  | HLT      | 76 | Stop Operation   |

### Results generated from sim8085 designed by Jubin Mitra

M[204E] = 02H, M[204F] = 05H, M[2050] = ABH, M[2051] = CDH, M[2052] = 01H, M[2053] = FFH, M[2054] = 02H, therefore M[204D] = 04
